

GEMBOREE 2021
Hobart Show Grounds
Glenorchy April 2-5

LUNARIS GEMSTONES

Specialising in... Tasmanian fossils (Jurassic ferns and woods),
Tasmanian minerals (incl. crocoite) & Tasmanian gemstones - stichtite &
Buttongrass Jade® jewellery, Sister's Creek zircon, Killiecrankie topaz &
Lune River agate.

Opal, lapidary slabs, worldwide minerals (esp. China) and fossils.

If you can't make it to Gemboree 2021, you can browse products online
or welcome to visit our showroom at Lune River in **Tasmania's
FAR SOUTH.**

ALSO trading every Saturday at Salamanca market in Hobart.

SHOWROOM: 175 Lune River Rd., Lune River – Open most days 9-5

Tel: +61 3 6298 3182 / 0447 001 601

TASMANIAN PROSPECTOR

Mineral Resources Tasmania produces four publications vital to mineral enthusiasts in Tasmania:

- A Catalogue of the Minerals of Tasmania
- Occurrences of Gemstone Minerals in Tasmania
- Fossicking Areas in Tasmania
- Alluvial Gold in Tasmania

Copies may be obtained in person at the Mineral Resources Tasmania office in Hobart, by mail request to:
PO Box 56, Rosny Park TAS 7018
by calling: (03) 6165 4728
or by emailing: info@mrt.tas.gov.au

TASMANIAN PROSPECTOR

The Department of State Growth regulates prospecting in Tasmania. Potential fossickers for mineral specimens should first pick up a copy of *Fossicking Areas in Tasmania*, or visit www.mrt.tas.gov.au to discover the locations of designated sites around the state.

Enthusiasts hankering to explore beyond the boundaries of Tasmania's fossicking sites will need to obtain a prospecting licence by stopping into Mineral Resources Tasmania in Burnie, by mail request to: PO Box 56, Rosny Park TAS 7018 by calling: (03) 6477 7385, or emailing: info@mrt.tas.gov.au.

Mineral Resources Tasmania

Designated Fossicking Areas in Tasmania

Visit www.mrt.tas.gov.au for more information.

Fossicking Areas General Information

Fossicking for mineral specimens is supported and regulated by Mineral Resources Tasmania.

There are many localities within Tasmania where interesting lapidary and mineralogical material may be found, some of the best of these areas have been set aside for the use of fossickers.

The areas defined in this booklet have been declared official Fossicking Areas under the *Mineral Resources Development Act 1995*.

Under some circumstances, Fossicking Areas may be included within the boundaries of an Exploration Licence.

Fossicking beyond the boundaries of the Fossicking Areas in this booklet will require a prospecting licence, which can be obtained from Mineral Resources Tasmania for a fee.

Fossicking areas extend from the ground surface to a depth of two (2) metres.

Explorers are expected to use the same prospecting methods as fossickers; i.e. no costeanning, trenching or large-scale pitting. Drilling will be allowed with the written permission of the Director of Mines, subject to conditions to protect the integrity of the site.

Conditions apply to activities conducted within Fossicking Areas. Fossickers should avoid causing undue damage to the land, and should take only a 'fair share' of material. Don't be greedy! Fossicking areas are set aside for the use of amateur fossickers and cannot sustain collection for commercial purposes.

Please read the conditions of use of these areas and be sure to abide by them when in the field.

Field Trips

GEMBOREE 2021

A number of half to full day excursions are planned during the Gemboree. The following list is tentative and will be confirmed closer to the date. It is envisaged that participants will organise their own fossicking licence, transport, collecting and safety equipment prior to the trips.

Drip Beach

- ★ This trip will visit Drip Beach, which has a very interesting geological setting and where you can collect agate off a public beach for polishing or tumbling.

Lune River

- ★ This trip will visit this a designated fossicking area of international repute due to its wonderful Jurassic age fern fossils.

Bridgewater Quarry

- ★ This trip will visit the Bridgewater road metal quarry, where you will find calcite and aragonite of late Tertiary age.

Coal Hill

- ★ This trip will visit the Coal Hill designated fossicking area, where you will be able to collect fine specimens of agate and chalcedony.

For further information (if necessary prior to arriving) contact:

Drip Beach

An hour's drive south of Hobart, about 10 km south of Cygnet, you will come to a small beach near Lymington.

This is Drip Beach—and the location has long been a source of grey/white agate for polishing and tumbling. These have been eroded from Tertiary river gravels in the river banks (but please don't dig into them).

The agate is very similar to those at Calder in NW Tasmania. The ultimate source is uncertain but probably around Mt Weld and Blake's Opening, far up the Huon River, and it can be found in other spots along the river. It is probably a replacement or infilling in Precambrian dolostones, related to the coarse quartz crystals found in these rocks in many places.

Panning at Lymington

The Cygnet area is of great interest geologically, as it contains abundant feldspar and garnet-rich rocks of Cretaceous age (~100 Million years), associated with some gold mineralisation. These rocks outcrop as dykes and some gold can be found as specks along many beaches in the area. Please note though, that some of these areas are geological monuments and public beaches, so collecting is restricted.

Lignite with Limonite/Goromite, plus agate-bearing pebble beds.

Lune River

About 100km south of Hobart you will find a designated fossicking area called Lune River.

You go via Huonville, and it is a good sealed road to Lune River, then a short distance on dirt to the 5km² site. Here you will find the famous Tasmanian fossilised fern.

Collection can be undertaken in an area east of Lune Sugarloaf, starting 2 km south from the old Ida Bay Township, extending east to cover flats bordering the now disused Leprena Road to Catamaran. The best collecting areas are in more open areas, such as recently clear-felled sites (but avoid active forestry sites). Material is widespread on the surface, in outcrop, creeks and small pits.

Please note that collecting is not permitted in the wildlife sanctuary, which covers most of the area to the east of the Leprena Road. Furthermore, collecting within the proclaimed Lune River Fossil Reserve Site is not permitted (see map).

The area yields petrified (silicified) fern (commonly, but incorrectly, described as manfern), agate, petrified wood and jasper. The agate includes carnelian and may enclose quartz crystal-lined geodes. The petrified fern is highly prized in lapidary circles and this is one of the few sources of the material known within Australia. The material is eroding from some Jurassic basalt and sedimentary rocks which is geologically unique in Tasmania, and therefore of considerable geological significance (hence the Fossil Reserve).

Special Conditions

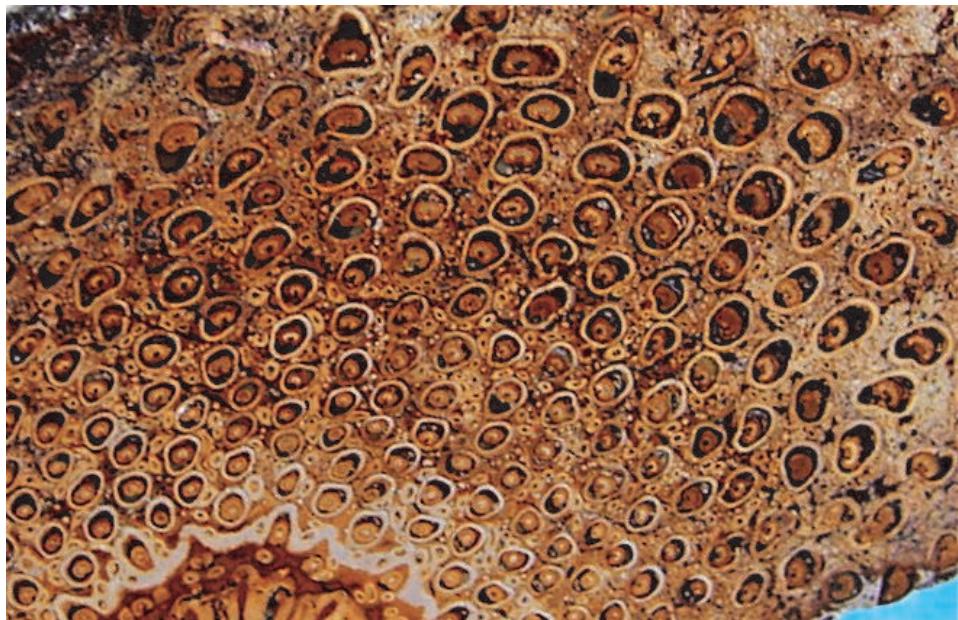

- The Southport Lagoon Conservation Area is excluded from the Fossicking Area.
- No speleothems (stalactites, etc.) may be collected from any caves in the vicinity of this Fossicking Area.
- Unusual specimens of petrified fern must be submitted to the Parks and Wildlife Service to allow study of palaeofloras represented by these finds.
- The Fossicking Area excludes the Lune River Fossil Site and the Southport Lagoon Wildlife Sanctuary.
- Open fires are not to be lit and there will be no burning off to facilitate digging without the approval of the District Forester.

Fossil ferns

The fern fossils are mostly members of the family Osmundaceae, which is first recorded from the Early Permian (~280 million years) and living varieties can still be found today. The species at Lune River are of Jurassic age (~100 millions years old).

The fern species found include:

- *OSMUNDACAULIS nerii*
- *OSMUNDACAULIS jonesii*
- *OSMUNDACAULIS janii*
- *OSMUNDACAULIS richmondii*
- *OSMUNDACAULIS pruchnickii*
- *OSMUNDACAULIS griggsii*
- *OSMUNDACAULIS tasmanensis*
- *OSMUNDACAULIS andrewii*
- *ASHICAULIS wrightii*
- *LUNEA jonesii*
- *OGURACAULIS banksia*
- *CIBOTIUM tasmanense*
- *TASMANOPTERIS richmondii*

GEMBOREE 2021 ENTRY FEES

For those who are staying EITHER ON OR OFF SITE

To arrive no later than the 31st of January 2021

Send the form below to the GEMBOREE 2021 Secretary including a stamped self addressed envelope.

Payment can be made either by a Cheque/Money Order made out to "GEMBOREE 2021" or
Direct Deposit to: BSB/Account No 037-001 749776 (include "Registration" and your Name as reference)

TAILGATING - Terms and Conditions

- 1. I will abide by the following terms and conditions to Tailgating at the 'Event'.**
- 2. I will sell only items or material, which will be of a lapidary nature or lapidary related.**
- 3. I will trade only within the times and areas allotted to me by the 'Event' Organisers.**

Tailgating sites to be cleared at end of trading times each day. Camping prohibited in tailgating area.
- 4. I will trade in a respectful manner at all times and follow instructions from the organising committee.**
- 5. Application to Tailgating does not entitle me to trade, except upon acceptance by the 'Event' Organisers and receipt of the Booking Ticket which becomes my Permit to Trade.**
- 6. A copy of my Public Liability Insurance cover with a minimum cover of \$20M that will be valid (or renewed) at the time of this event will be emailed to the organisers within 14 days of placing my booking.**
- 7. Applications and Bookings lodged without supplying a copy of the Insurance Policy or Certificate of Currency within 14 days may be rejected and therefore cancelled with a full refund less any 'booking fees' paid.**
- 8. Bookings cancelled up until 2 months prior to the 'Event' will receive a full refund less any 'booking fees' paid. Any cancellations made within 2 months prior to the 'Event' without good reason will forfeit any 'booking fees' paid plus all or part of their Tailgating fees paid.**
- 9. If I contravene any part of these terms I agree to vacate the 'Event' site and forfeit all monies paid.**

NOTE:

1. Places will be allocated on a first come first in basis.

2. Do not turn up on the day expecting to Tailgate.

No booking no tailgating.

Additional Information

Fossickers sometimes journey to Benders Quarry, off South Lune Road, while in the area. Specimens of travertine and calcite crystals have been found in the quarried limestone. The quarry has been closed and the area is now a National Park within the Tasmanian Wilderness World Heritage Area managed by the Parks and Wildlife Service. Collection of specimens from the quarry site is illegal without the permission of the Parks and Wildlife Service.

Laumontite, heulandite and other zeolites (crystals and massive forms) have been collected at another quarry on South Lune Road, operated by Forestry Tasmania. Entry into this quarry can only be made with the permission of the District Forester.

Bridgewater Quarry

This site is an active road metal quarry which produces some interesting minerals, including calcite and aragonite. It is near the Midlands Highway near Bridgewater, some 25km north of Hobart.

Geological Notes:

The major rock type present here is a basalt, a fine grained plagioclase-pyroxene-olivine bearing volcanic rock common in Tasmania, here of late Tertiary age (~ 10-20 million years). There is also an old stream channel exposed, filled with clayey sand and gravel. The basalt contains abundant columnar jointing in diverse orientations suggesting that the original surface was very irregular and the volcanic vents were probably cutting through the older flows as dykes. The lava probably flowed down the old Jordan River into the Derwent Valley, to about Claremont. Lava tubes were once present.

The basalt is vesicular in part (particularly near the top), and these vesicles (frozen gas bubbles, up to 10cm in diameter) commonly contain interesting minerals. Aragonite also occurs as small “fibrous” veinlets.

The minerals identified to date include: calcite (botryoidal to about 35 mm diameter, white to pale green and brown), siderite (botryoidal, brown), aragonite (small to large prismatic crystals, also fibrous-massive, colourless to pale brown), quartz (chalcedony), baryte

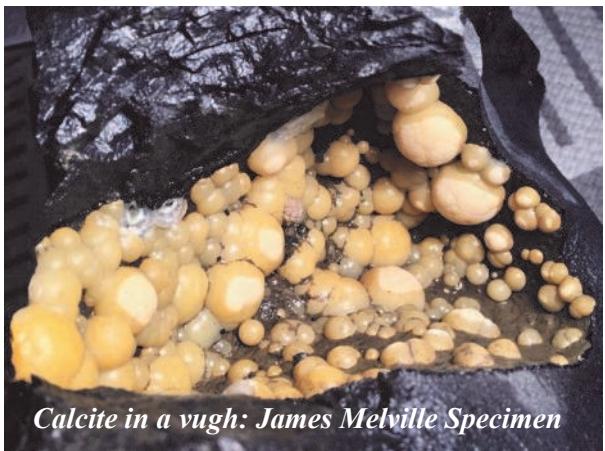

*Unusual pipe vesicles in
basalt with globules of
white calcite to a few cm.*

(attractive groups of colourless, bladed crystals to about 5 mm), opal?, pyrite, hisingerite (glassy black), nontronite (blue-green), feldspar (fine white crystals lining cavities) and ilmenite (small black crystals lining cavities). Zeolites are notably lacking, perhaps due to insufficient depth of burial and/or low groundwater temperatures and/or unsuitable fluid compositions; they are commonly found at deeper levels than exposed here.

The Bridgewater quarry is a reliable location of choice for those die-hards who know that enjoyment comes in the form of taking a 5lb sledge hammer to a solid piece of basalt and progressively smashing it down in size.

Calcite in a vugh: James Melville Specimen

Columnar jointing

Coal Hill

Access

This 9 km² area is about 90 km south southwest of Hobart in southern Tasmania. It is reached via Huonville on good sealed roads as far as Hastings or Dover, and then on fair unsealed roads and forestry tracks. The Lune River fossicking area is nearby. Travellers should watch out for log trucks and forestry operations.

Collecting Area

Over an area around and to the southeast of Coal Hill, approximately four kilometres northwest of Hastings. Collecting is best in recently clear-felled areas.

Material

The area yields fine specimens of agate and chalcedony. Some agates may contain geodes with crystalline quartz, rarely amethystine.

Special Conditions

- No fossicking within 200 m of the centreline of the Hastings Caves Road.
- No fossicking to take place in any area of new plantation or regeneration until the trees are five metres tall or five years old, whichever is the sooner, subject to the discretion of the District Forester.
- No fossicking to take place within any area where a forestry operation is being carried out (e.g. logging, clearing, burning, sowing or planting).
- Fossickers abide by the forestry safety, health and welfare regulations.

Coal Hill agate

THE HISTORY OF GEMBOREE

The first GEMBOREE was staged in 1965 at Coonabarabran, NSW. It was organised by Norm Patison, editor of the Australian Lapidary Magazine. Norm had the vision of the GEMBOREE becoming a national gathering of lapidaries who, until 1965, had done little beyond forming a few clubs, without much thought of communication or interaction. Interstate contact was non-existent in those days.

After organising the second GEMBOREE in 1966 with even greater success, Norm issued a challenge "for any one, two or three clubs to host next year's GEMBOREE". The challenge was accepted by three Sydney clubs who organised the 1967 GEMBOREE at Nundle, then 4 clubs combined to run it in 1968 at Gundagai.

In 1968, the newly formed Combined Victorian Gem Clubs Association staged their first state gathering - the Gemkhana. It was held over the March Labour Day weekend to avoid clashing with the GEMBOREE.

Success of the Gemkhana encouraged the Victorian Association to seek permission to run the 1969 GEMBOREE - with the object of making it a truly national show, staged in a different state each year. Permission was readily given, and Beechworth in northern Victoria was the venue of the first GEMBOREE held outside NSW. The Australian Lapidary Magazine gave terrific support to the organisers, and the result was the then biggest crowd seen at a GEMBOREE.

Since 1969, the GEMBOREE has been staged in all states and territories. 1972 was the first year for South Australia, and Queensland's first was in 1974. 1980 was the debut for Western Australia, and Tasmania kicked off in 1981. In 1988, the GEMBOREE was staged in Canberra and in 1993 it was held at Alice Springs. Sadly, WA's very small lapidary population combined with distance forced WA to withdraw as a GEMBOREE host - at least for the moment.

Norm Patison lived to see the GEMBOREE become a truly national event, and his name is commemorated on a perpetual trophy at the national gem & mineral competitions held in conjunction with GEMBOREE.

BEACONSFIELD MINE & HERITAGE CENTRE

"BEST MINE DISPLAY &
MUSEUM IN AUSTRALIA"

"GREAT
VALUE!"

West Street, Beaconsfield (40 minutes from Launceston)

Open 9.30am - 4.30pm daily 7 days a week
